

NotebookLM-CLI One-Click Kit — Full Beginner Guide (GUIDE)

A very detailed guide for **people new to computers, AI, and messaging apps**. Follow every line. All technical terms are explained in plain words.

1. What is this? (1 minute)

- **NotebookLM** = Google's "AI notebook" that reads your sources (documents, links), **summarizes** them, and **answers questions**.
 - Normally you use it on a website with your mouse.
 - This **kit (NotebookLM-CLI One-Click Kit)** lets you use it from your **computer commands** and **AI assistants** (Claude, Cursor).
 - No commands needed — **just pick a number** in the black window.
-

2. Prerequisites

1. **Internet** (Wi-Fi/LAN) — programs are downloaded online.
2. **Google account** — NotebookLM is a Google service (your everyday Gmail works). Sign up free at <https://accounts.google.com>.
3. **Chrome browser** — used for the login window (<https://www.google.com/chrome/>).

Everything else (Python, etc.) is handled **automatically** during install.

3. Download required programs

This kit needs **Python** (versions **3.10–3.13**). It's usually auto-guided, but to install manually:

1. Go to <https://www.python.org/downloads/>
2. Click the yellow **"Download Python 3.x.x"** button.
3. Run the file. ⚠️ **Check "Add Python to PATH"** on the first screen (critical!).
4. Click **"Install Now"** → wait → **"Close"**.
5. Return to `시작하기.bat`.

`uv` and `notebooklm-mcp-cli` are installed **automatically** during setup (uv first, pip as fallback).

4. Install (step by step)

1. Open the kit folder (extract the zip first if needed — right-click → "Extract All").
2. Double-click `시작하기.bat`.
3. Press `1` + Enter (Install). Press any key to proceed.
4. It runs **6 steps automatically** (nothing for you to do but wait):

Step	On screen	What it does
<code>[1/6]</code>	Internet check	Checks your connection
<code>[2/6]</code>	Find Python	Auto-detects Python
<code>[3/6]</code>	pip check	Prepares the installer (pip)
<code>[4/6]</code>	uv check/install	Prepares the fast installer (uv)
<code>[5/6]</code>	Install notebooklm-mcp-cli	Downloads the tool — wait a bit
<code>[6/6]</code>	Verify	Checks <code>n1m</code> version

5. When **"INSTALLATION COMPLETE"** appears, you're done.

If "Python not found" appears, install Python (§3, **check "Add Python to PATH"**) and run **[1] Install** again.

5. Run / Use

1. **시작하기.bat** → **2** (Run) → Enter.
2. The RUN menu opens.
3. First time? Press **S** (Easy Start) — it guides you:
 - **Login**: when Chrome opens, log in with your Google account as usual.
 - **AI connection** (optional): choose Claude Code (**1**) or Cursor (**2**) — or press Enter to skip.
 - **First notebook** (optional): type a name — or press Enter to skip.
4. Then use **[9] List notebooks**, **[1] Start server**, etc.

If you see "[!] not installed yet" at the top, run **[1] Install** first.

6. Menu — each item

No	Name	Detail
.		
S	Easy Start	Login → AI connection → first notebook in one flow. Do this first.
T	Glossary	Explains MCP·pip and other terms in plain words
1	Start MCP server	Turns on the "bridge" so AI assistants can reach NotebookLM. Stop with <code>Ctrl+C</code>
2	Google login	Auto login via Chrome. Enter a profile name if you have multiple accounts
3	Check login	See if you're currently logged in
4	Manual login	When auto fails, log in with a cookie file (enter its path)
5	Diagnose	Auto-checks the cause (<code>nlm doctor</code>). Try this first when stuck
6	Profiles	List registered accounts (profiles)
7	Logout	Delete login data. Type <code>yes</code> to proceed. Re-login via <code>[2]</code>
8	Direct <code>nlm</code> command	Type commands after <code>nlm</code> (advanced). E.g. <code>notebook list</code> (Enter = help)
9	List notebooks	Shows your notebooks
10	Create notebook	Enter a name to create a new notebook
11	AI mode	Runs <code>nlm --ai</code> (detailed help for AI assistants)
12	Version	Shows installed versions (nlm-uv·pip)
13	Update	Upgrade to the latest
14	Force update	Force-reinstall the latest (when outdated)
15	Connect AI tools	Auto-connect Claude Code·Cursor·JSON (see §7)
16	Environment info	Shows install path, Python path, auth folder, etc.
0	Exit	Close the menu

7. Connect to AI assistants

1. In the RUN menu, type `15` → Enter.
2. Choose a method:
 - `1` Claude Code (auto)

- **2** Cursor (auto)
- **3** JSON auto-config for supported tools
- **4** Manual help (JSON examples for Claude Desktop / VS Code / Gemini)

3. When "connection attempted" appears, it worked.

4. **Fully restart the AI app** so the connection takes effect.

No manual file editing needed. For manual setup, **[15] → 4** shows JSON examples and file paths.

Manual JSON (only if auto fails):

```
{
  "mcpServers": {
    "notebooklm-mcp": { "command": "notebooklm-mcp" }
  }
}
```

Config file locations: Claude Desktop `%APPDATA%\Claude\claude_desktop_config.json` · Cursor `%USERPROFILE%\cursor\mcp.json` · VS Code `%USERPROFILE%\vscode\mcp.json` · Gemini CLI `%USERPROFILE%\gemini\settings.json`

8. Workflow

- 1) Install : 시작하기.bat → [1] (notebooklm-mcp-cli auto-downloaded & installed)
- 2) Login : [2] Run → [2] Login (Chrome → Google login; auth stays on your PC)
- 3) Connect : [15] → Claude Code/Cursor (optional)
- 4) Use : [1] Start server / [9] List notebooks / AI assistant calls it

- You only **install + log in once**; afterwards just use **[2] Run**.
- Auth data is stored **only on your PC** (`%USERPROFILE%\notebooklm-mcp-cli`).

9. Troubleshooting (full)

💡 When stuck, try **[5] Diagnose** (`nlm doctor`) first — it usually finds the cause.

9-1. Window closes instantly (most common)

Usually because (a) the `.bat` files are scattered, or (b) the zip wasn't extracted.

Fix:

1. Make sure `시작하기.bat`, `INSTALL.bat`, `RUN.bat`, `UNINSTALL.bat` are **in the same folder**.
2. If you got a zip, **extract it** and run from the extracted folder.
3. If it still closes, keep the messages on screen:
 - Press `Win` → type `cmd` → Enter (a black window opens)
 - Copy the kit folder path from File Explorer's address bar
 - Type `cd` (with a space) + paste → Enter
 - Type `시작하기.bat` → Enter
 - Now the error text **stays**. Match it in the table below.

9-2. Symptom table

Symptom	Fix
<code>nlm</code> not found	Not installed yet → <code>[1] Install</code>
"Python not found"	Install Python (§3) with "Add Python to PATH" checked
Installed but RUN doesn't detect it	Close & reopen <code>시작하기.bat</code> → <code>[2]</code> (PATH refresh)
Internet warning	Check Wi-Fi/LAN and firewall, then retry
Login window doesn't open	Check Chrome → <code>[7] Logout</code> → <code>[2] Login</code>
Auto-login keeps failing	<code>[4] Manual login</code> (cookie file)
Looks outdated	<code>[14] Force update</code>
Connected but AI can't see it	Fully restart the AI app
Unknown issue	<code>[5] Diagnose</code> (<code>nlm doctor</code>)

10. FAQ

Q. Does it cost money? A. The kit and the underlying tool are **free**. NotebookLM itself follows Google's policy (has a free tier).

Q. Do I need internet? A. Yes — when **installing** and when **using NotebookLM**.

Q. Does my data leak out? A. Google login data is stored **only on your computer**. This kit does not send your data anywhere.

Q. Does it work on Mac? A. The `.bat` files are **Windows-only**. On Mac, install the underlying tool (`notebooklm-mcp-cli`) directly.

Q. I think I installed it wrong. How do I start over? A. Use `[4] Uninstall` to clean up, then `[1] Install` again.

Q. Can I delete Python? A. This kit does **not** delete Python. Other programs may use it, so it's best to keep it.

Q. I have multiple accounts. Can I separate them? A. Yes. Enter a **profile name** at `[2] Login`; each account is stored separately. Check with `[6] Profiles`.

11. Uninstall

1. `시작하기.bat` → `4` (Uninstall) → Enter
2. Type `yes` to confirm → Enter
3. **6 automatic steps:**
 - Remove AI links → remove via uv → remove via pip → delete login data → final verify
4. Done when **"UNINSTALL COMPLETE"** appears.
5. **Python is kept** (intentional — other programs may use it).

If an AI link isn't removed automatically, delete just the `notebooklm-mcp` entry from the config file (§13).

12. Glossary

Term	Plain meaning
NotebookLM	Google's AI notebook that reads your sources and summarizes/answers
nlm	The tool name that controls NotebookLM via computer commands
MCP	A "bridge" connecting AI assistants (Claude·Cursor) to this tool. Turn it on and the AI sees your NotebookLM
server	The "conversation channel" started by <code>[1]</code> . Stop with <code>Ctrl+C</code>
Python / pip	The runtime & installer this tool needs (handled automatically)
uv	A faster modern installer (automatic)
PATH	How your PC finds the <code>nlm</code> command. Recognized in a new window after install
profile	A login label stored separately per account
cookie	A small file holding your login state. Used for manual login

13. File / data locations

Inside the kit folder: `시작하기.bat` (main) · `INSTALL.bat` · `RUN.bat` · `UNINSTALL.bat` · `README.md` (Korean) · `README.en.md` (English) · `GUIDE.md` (Korean) · `GUIDE.en.md` (this file) · `사용설명서.txt` (short, Korean) · `README.pdf` · `README.en.pdf` · `GUIDE.pdf` · `GUIDE.en.pdf` (PDF, identical content) · `LICENSE` · `NOTICE`

Data stored on your PC: `%USERPROFILE%\notebooklm-mcp-cli` (Google login data, **on your PC only**)
Note: `%USERPROFILE%` is usually `C:\Users\<your name>` .

AI tool config files (only when connected): Claude Desktop `%APPDATA%\Claude\claude_desktop_config.json` · Cursor `%USERPROFILE%\cursor\mcp.json` · VS Code `%USERPROFILE%\vscode\mcp.json` · Gemini CLI `%USERPROFILE%\gemini\settings.json`

14. Commands (reference)

You normally never type these — the menu does it. In RUN `[8]` , type only the part **after** `nlm` .

Command	Description
<code>nlm login</code>	Google login (Chrome, auto)
<code>nlm login --check</code>	Check login status
<code>nlm notebook list</code>	List your notebooks
<code>nlm notebook create "name"</code>	Create a new notebook
<code>nlm notebook query</code>	Ask a notebook
<code>nlm source add</code>	Add sources (URL · Text · Drive · File)
<code>nlm studio create</code>	Create Studio content (Audio, Video, etc.)
<code>nlm download <type></code>	Download artifacts
<code>nlm setup add claude-code</code>	Auto-connect Claude Code
<code>nlm setup add cursor</code>	Auto-connect Cursor
<code>nlm setup list</code>	List connected AI tools
<code>nlm setup remove <tool></code>	Disconnect a tool
<code>nlm doctor</code>	Auto-diagnose problems
<code>nlm --ai</code>	AI mode (help for AI assistants)
<code>nlm --version</code>	Show version
<code>notebooklm-mcp</code>	Run the MCP server (for AI assistants)

15. License · Copyright · Safety

- **This kit:** **Apache License 2.0**, Copyright 2026 **SoDam AI Studio** (full text in `LICENSE`, notices in `NOTICE`). Commercial use allowed; when distributing, ① include `LICENSE` ② keep `NOTICE` ③ state changes ④ don't misuse the marks.
- **Underlying tool** `notebooklm-mcp-cli` : **MIT License** (separate package; confirmed on PyPI & GitHub; v0.7.6 as of 2026-06). This kit **does not bundle** it — it only **downloads from PyPI**. The **upstream repo's LICENSE is authoritative**. Source: <https://github.com/jacob-bd/notebooklm-mcp-cli>
- **Trademarks:** "NotebookLM/Google/Chrome" (Google LLC), "Claude" (Anthropic), "Cursor" (its owner). This kit is **unofficial** and not affiliated with them; marks are used for identification only.
- **Safety:** login data is stored **only on your computer**; the kit doesn't touch system folders. Provided **"AS IS"**; you are responsible for your use.
